

Axle Health on the Compassus Episode

Where Axle would sit in our flow as demoed on 22 Sep 2026, and where automation is live, paused or still open

AUTOMATION

- IN AXLE TODAY

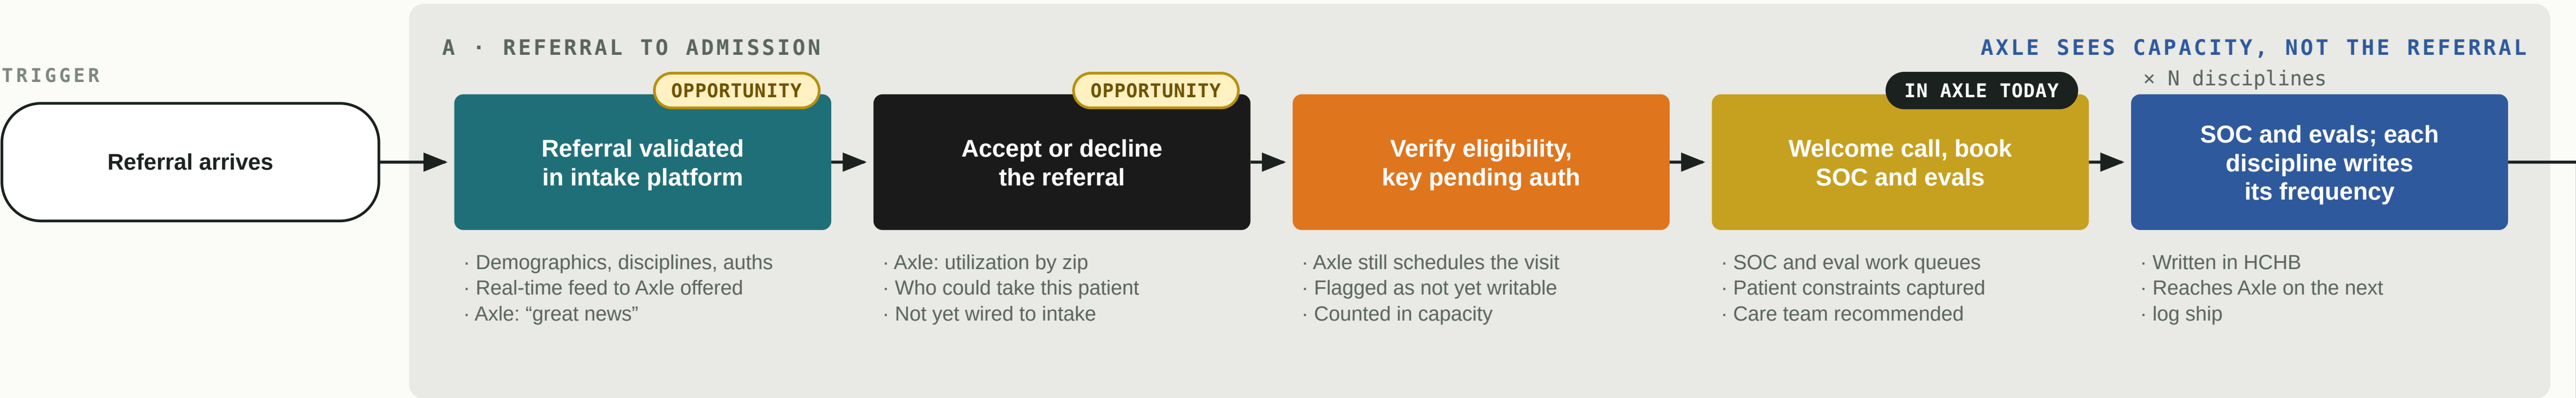

demonstrated in software
- IN DEVELOPMENT

stated as in development
- PAUSED

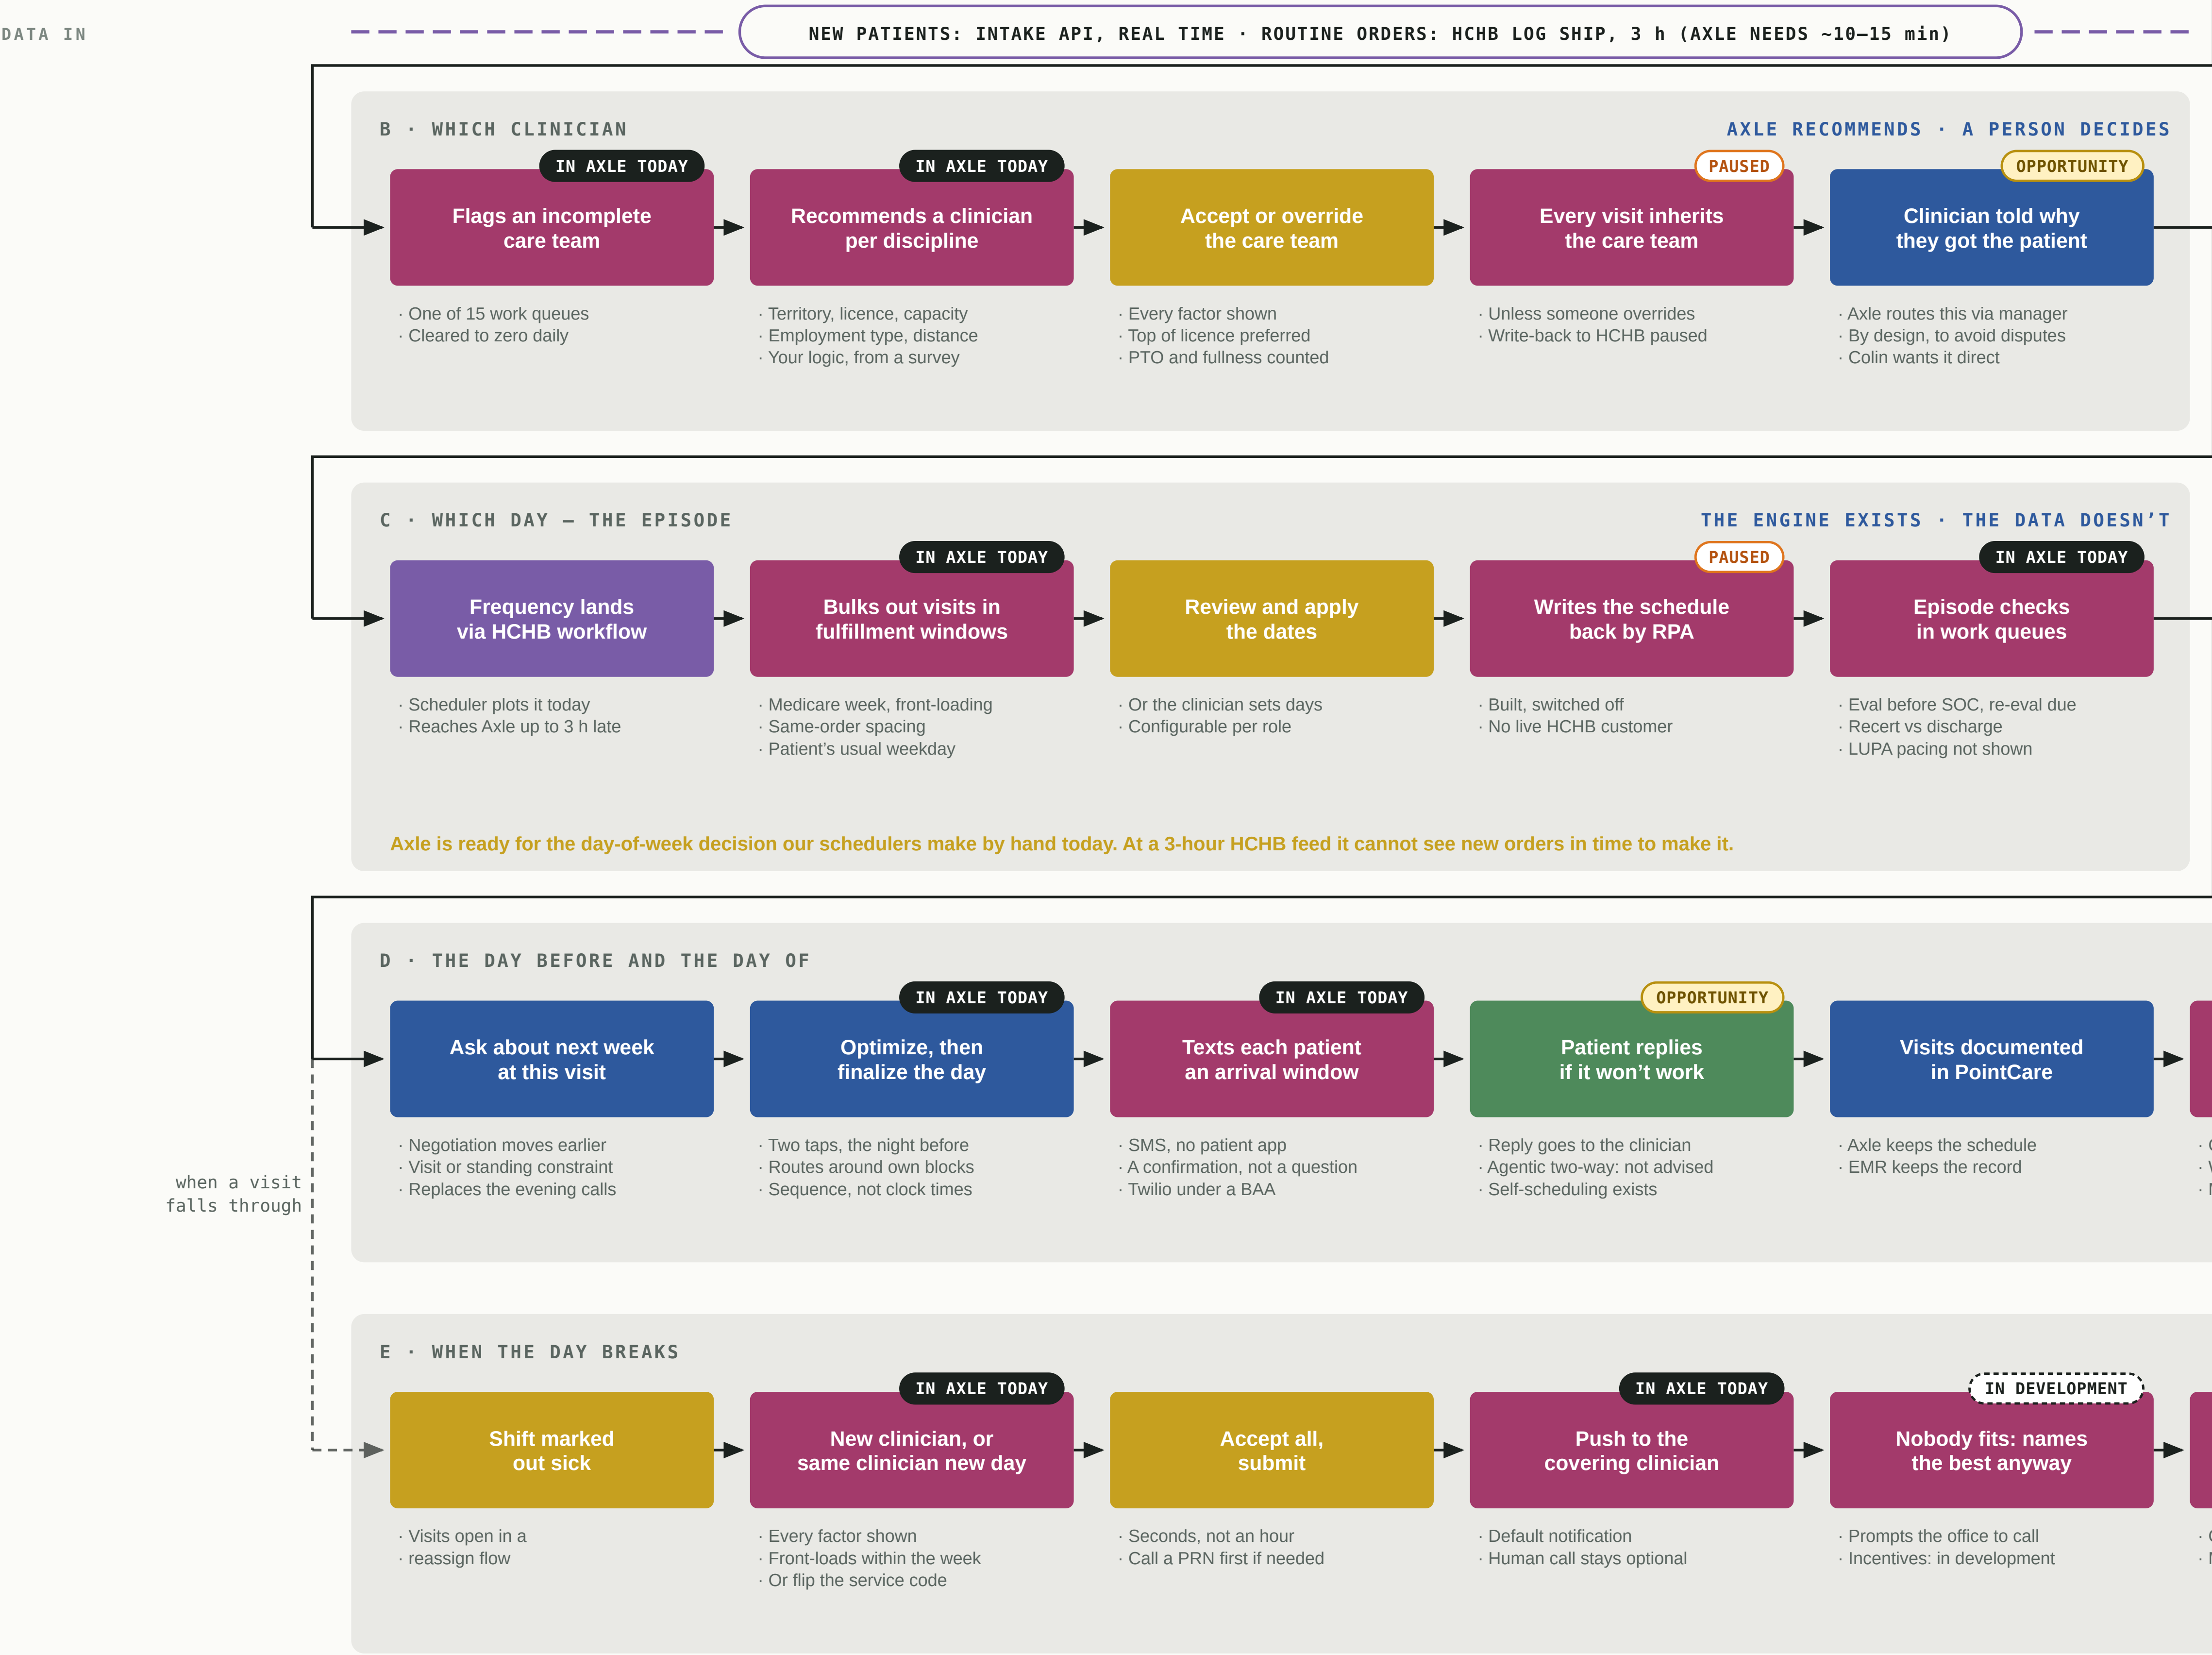

built, switched off
- OPPORTUNITY

not built · ours to push

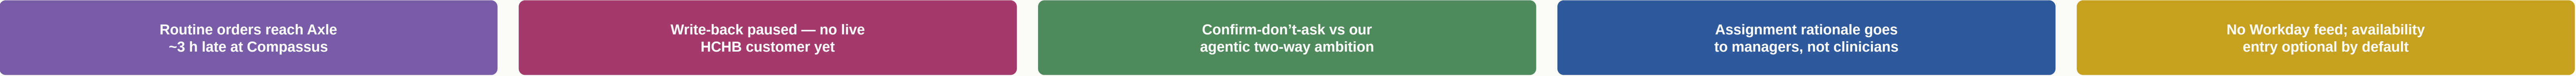

TRIGGER

DATA IN

WHERE IT BREAKS

WHERE AUTOMATION IS POSSIBLE

IN AXLE TODAY AUTOMATED IN AXLE TODAY

- Work queues for every scheduling gap (B, C)
- Care-team recommendation with the math (B)
- Dates inside fulfillment windows (C)
- Route optimizer and patient texts (D)
- Call-out reassignment in seconds (E)
- Utilization and forecast by zip (A)
- Analytics that audit the assignment logic

PAUSED PAUSED

- HCHB read and RPA write-back (B, C)
- Waits on a faster, reliable HCHB feed

IN DEVELOPMENT IN DEVELOPMENT OR NOT BUILT

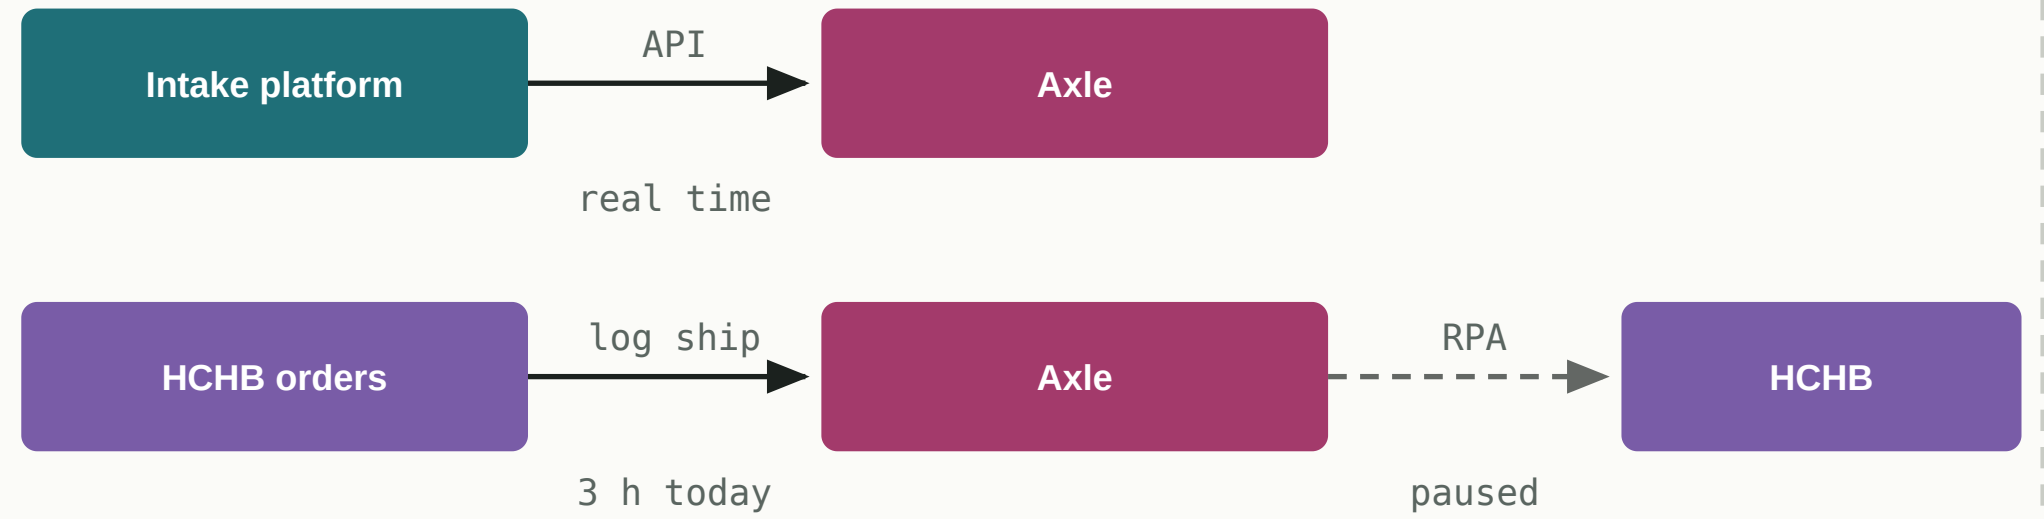

- Dynamic incentives for hard-to-fill visits (E)
- Workday integration for availability
- Mobile app shown only by video, to come

OPPORTUNITY OPEN OPPORTUNITIES FOR COMPASSUS

- Real-time intake feed for new patients (A)
- Capacity inside the accept / decline call (A)
- HCHB refresh by object: orders fast (C)
- Clinician sees why they got a patient (B)
- Two-way patient scheduling on top of confirm (D)
- LUPA pacing on the shared scenario (C)
- Marketing forecasts in and out of Axle (A)

Almost every step is live. The gap is the HCHB feed, and that one is ours.

THE DATA PATH — WHAT GATES GO-LIVE

Axle won't go live on data it can't time: new-patient data within ~10 minutes, predictably. The intake feed covers new patients; routine orders need a faster HCHB refresh before band C works.
