COMPASSUS HOME HEALTH · TARGET STATE

Plan of Care → Assignment

The DCS and scheduler handoff — a simplified subset of the full swimlane

Intake · Insurance & Auth · DCS · PCC / Scheduler · Clinician · HCHB

SIZE = WEIGHT · large = every time · small = conditional · pill = watch condition

TRIGGER

Referral arrives with initial orders

PASS 1 · START OF CARE / RESUMPTION OF CARE — from the referral

AUTOMATE — Intake receives referral in Commure

AUTOMATE — Auth team verifies eligibility, keys pending auth

traditional Medicare passes straight through; any other payer routes to the auth team

Intake final approval

DCS reviews referral

AUTOMATE — Scheduler books SOC / ROC visit + discipline evals

Clinicians perform SOC / ROC + eval visits

after the eval visits, each discipline writes its own plan of care

OTHER TRIGGERS

Recertification OASIS recert visit, or non-OASIS recert eval

Physician order adds a discipline eval, or changes the visits ordered

no OASIS · adds, reduces or redistributes visits without changing the episode total

PASS 2 · DISCIPLINE PLAN OF CARE — the repeating pattern

× N disciplines — Clinician submits discipline plan of care

× N disciplines — DCS reviews & approves

Approved? — Yes

AUTOMATE — Visits generate in HCHB

Auth on file? — Yes

× N disciplines — Scheduler assigns to care team

Visits on clinician calendar

No — nothing moves forward

No

QA backlog visits compress

Returned to clinician for correction — visits are held

~~Pending auth not on calendar, not counted~~

EPISODE VISIT BUDGET — set at plan-of-care approval, steered by DCS

LUPA floor · too few visits

Utilisation ceiling · visits beyond need

Fixed 30-day PDGM payment: below the floor the period pays per visit; above the ceiling extra visits earn nothing and consume capacity.

TRIGGER

Missed visit

MISSED VISIT — the compliance chain

AUTOMATE — Clinician documents missed visit

AUTOMATE — Scheduler workflow notify MD

MD notified within 48h? — Yes

AUTOMATE — Documented in HCHB

No

ASSIST — DCS workflow 48h breach

TARGET STATE — optimal functionality, every variable acted on · solid = the tool does it; colour bar = it proposes; top stripe = it shows; dashed = no longer a step

DCS and Scheduler only
