

The weekend cascade — the same week, after

The same three referrals, the same patient decisions, and a different Monday.

TRIGGER

Friday, 4pm
three weekend starts

1 · FRIDAY · THREE WEEKEND STARTS COMMITTED

Three referrals accepted

- the same three referrals
- the same expected discharges
- nothing about Friday changes

Each start carries a readiness state

- confirmed, expected, or at risk
- based on discharge patterns
- and on what sales recorded

Weekend cover arranged the same

- one nurse Saturday, one Sunday
- but the slots are now provisional
- and a waiting list sits behind them

A second call is queued behind each

- patients who could start early
- if a slot came free
- nobody had to build that list by hand

THE SAME THREE, WITH THE RISK NAMED

THE WEEK IS BUILT ON THREE,
with something ready to take
the place of any that fall.

2 · SATURDAY

Readiness checked at seven

- automated, before the day starts
- the late discharge is already known
- no one had to chase it

First patient discharged late

- exactly as before
- the patient's situation is unchanged
- only our knowledge of it changed

The slot is offered on by eight

- to the waiting patient behind it
- who accepts for that morning
- the nurse's day stays full

Two starts delivered

- one planned, one recovered
- from a slot that would have expired
- the same nurse, the same shift

TWO STARTS, FROM THE SAME TWO SLOTS

A FULL SATURDAY
The late discharge cost nothing
except a different patient's order.

3 · SUNDAY

Welcome call made at eight

- standardised, and early
- not waiting on office capacity
- four hours earlier than before

The family still defers to Monday

- the same reasonable decision
- no system changes that
- but we know at eight, not at noon

Both slots reassigned by ten

- to patients ready today
- with the whole day still ahead
- the nurse works a full Sunday

Two starts on Sunday

- not the ones planned on Friday
- the slots were used, which is
- what the week actually needed

THE DEFERRAL STILL HAPPENS. THE DAY DOES NOT.

A SUNDAY THAT HELD
The deferral was never the problem.
Finding out too late was.

4 · MONDAY, AND THE WEEK THAT FOLLOWS

One admission lands on Monday

- the deferred patient, as agreed
- four already started
- Monday was planned for two

Routine visits run as planned

- nothing pushed into Tuesday
- nothing compressed
- no window put at risk

Thursday's referral is accepted

- the branch has genuine room
- because the weekend did its work
- the source is told yes

The target is met

- from the same demand
- and the same people
- with four weekend starts, not one

NO CASCADE

ONE WEEKEND, ONE WHOLE WEEK
The weekend set the week up
instead of setting it back.

WHAT THE WEEKEND GAVE THE WEEK

1 FRIDAY

- the same three, each carrying
- a readiness state and a backup

2 SATURDAY

- the slot is offered on by eight,
- the day stays full

3 SUNDAY

- an eight o'clock call, the same
- deferral, both slots reused

4 THE WEEK

- one lands Monday, the week runs
- as planned, the referral accepted
