

Routine Visit Scheduling

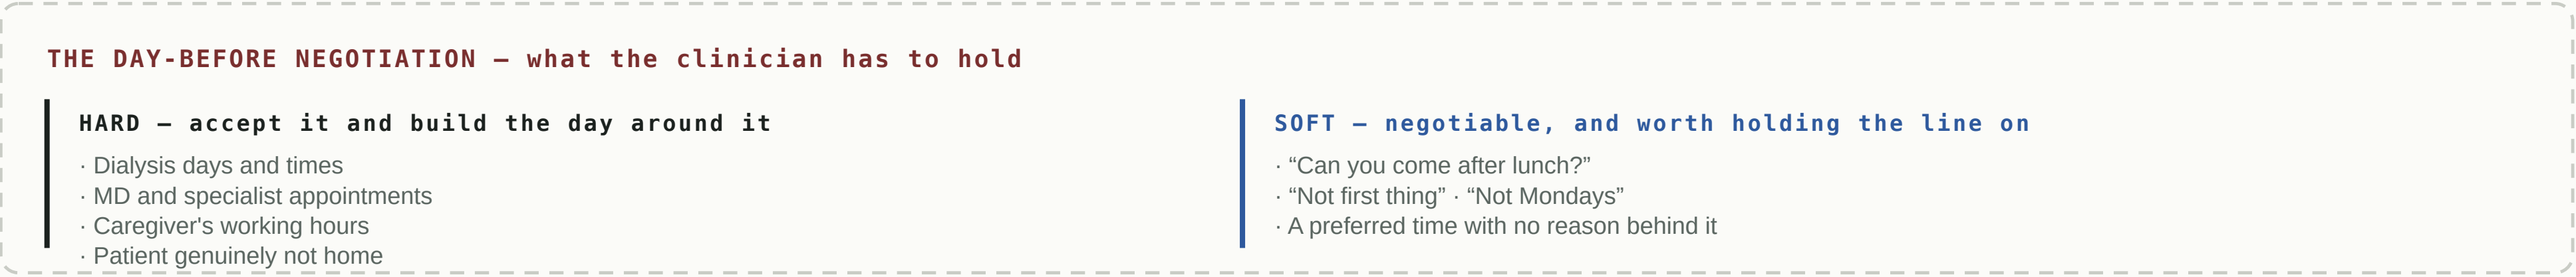

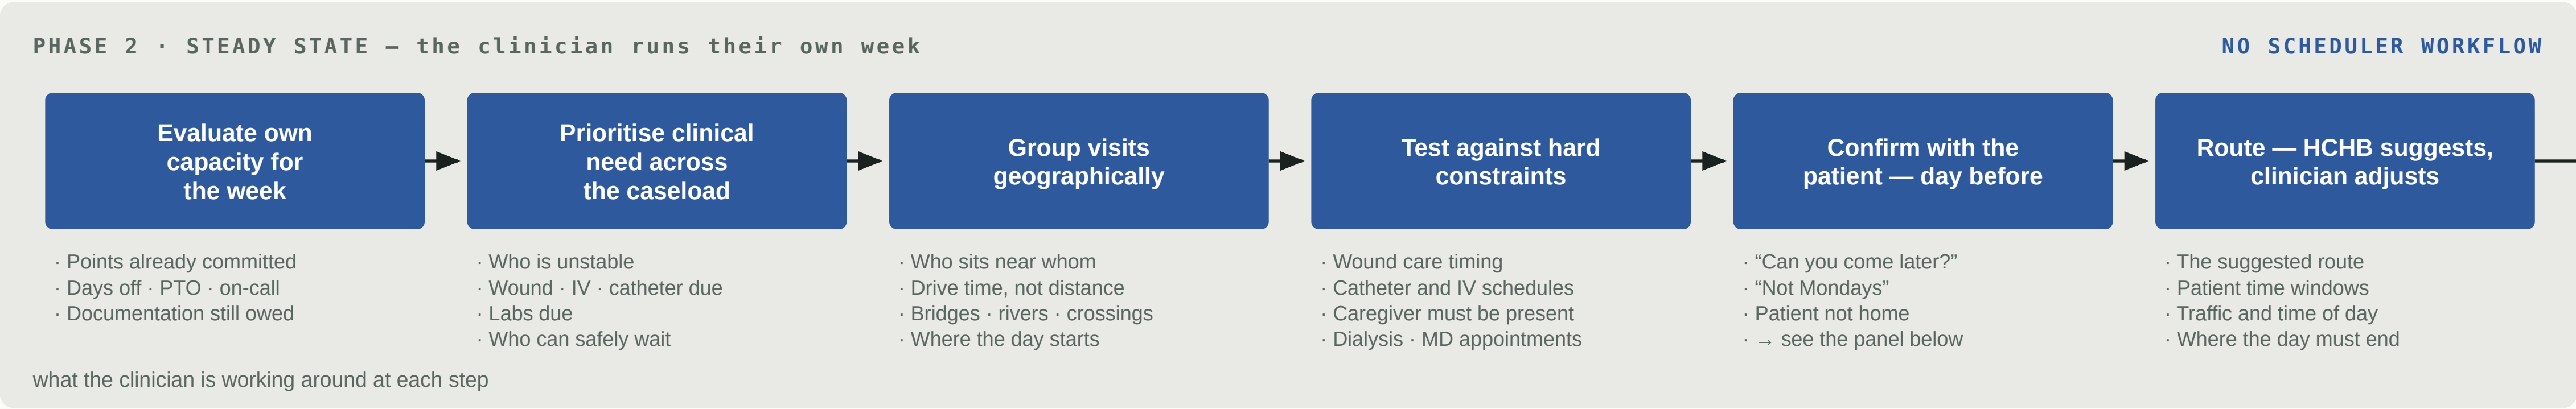

A burst of scheduler work at admission, then the clinician runs their own week

TRIGGER

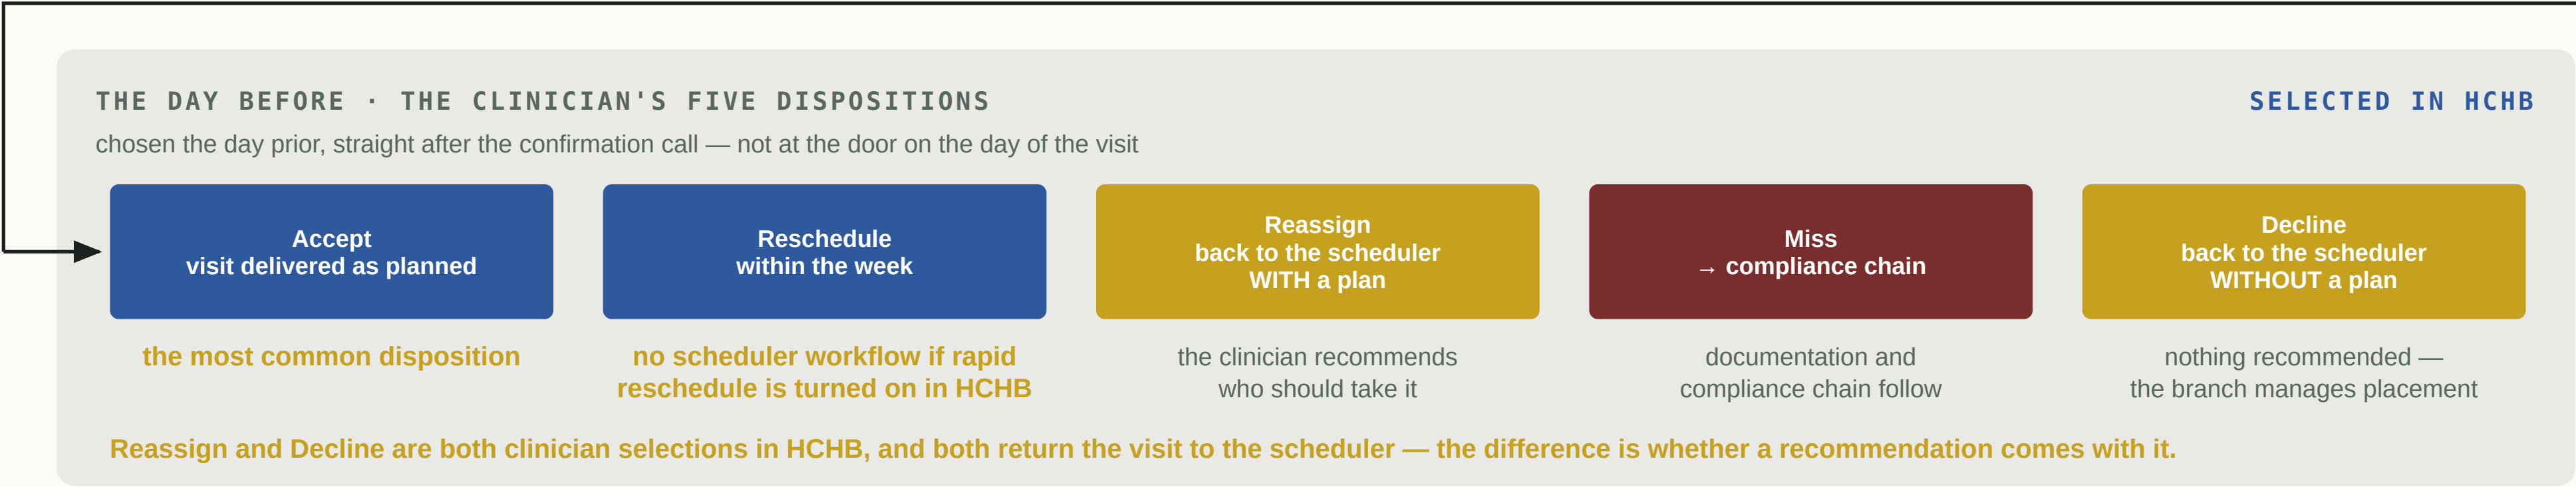

485 SUBMITTED – after this, every order is an add-on

add-on orders route through DCS approval and auth before reaching the scheduler

The first visit at 8 or 9am is the single largest lever on an individual clinician's capacity.

Newer clinicians let the patient set the time, become over-accommodating, and push the cost onto the rest of the team.
