

AI Coding | ICD-10 + QA — \$5.6M in Annual Net Value

ICD-10 outsourced to Nestmed · QA in-house with AI tool at no cost · base case before upside levers

Annual Net Value Build-up — ICD-10 + QA

Direct economics: \$7.6M value – \$2.0M cost = \$5.6M net annual benefit (276% ROI · ICD-10 \$2.1M + QA \$3.5M)

THE UPSIDE

Three upside levers — on top of the \$5.6M base case

Reimbursement uplift

\$5.5M

More accurate primary dx + comorbidity capture under PDGM — 1.0% of \$549M HH revenue

VBP performance

\$1.3M

Coding accuracy supports acuity capture & quality scores — 0.5% VBP swing on \$260M in-scope episodic revenue

Productivity improvements

Not yet valued

[Evan to insert callout — e.g., faster turnaround, capacity for growth, reduced LUPA risk]

Quantified upside: \$6.8M / yr +

If you have time, the only other thing to start thinking about is the business case for this scheduling effort. Here's a screenshot of how we typically layout our business cases. The 'hard savings' levers are shown on the waterfall, and the less certain, more challenging to measure are called out on the right. We can use Claude to build an excel model where we can play with assumptions, and then Claude can also generate this output.
