

Recertification & Discharge

Read beside Flow-Recert-Discharge — same blocks, same positions. A dashed, struck-through block is a step that no longer exists

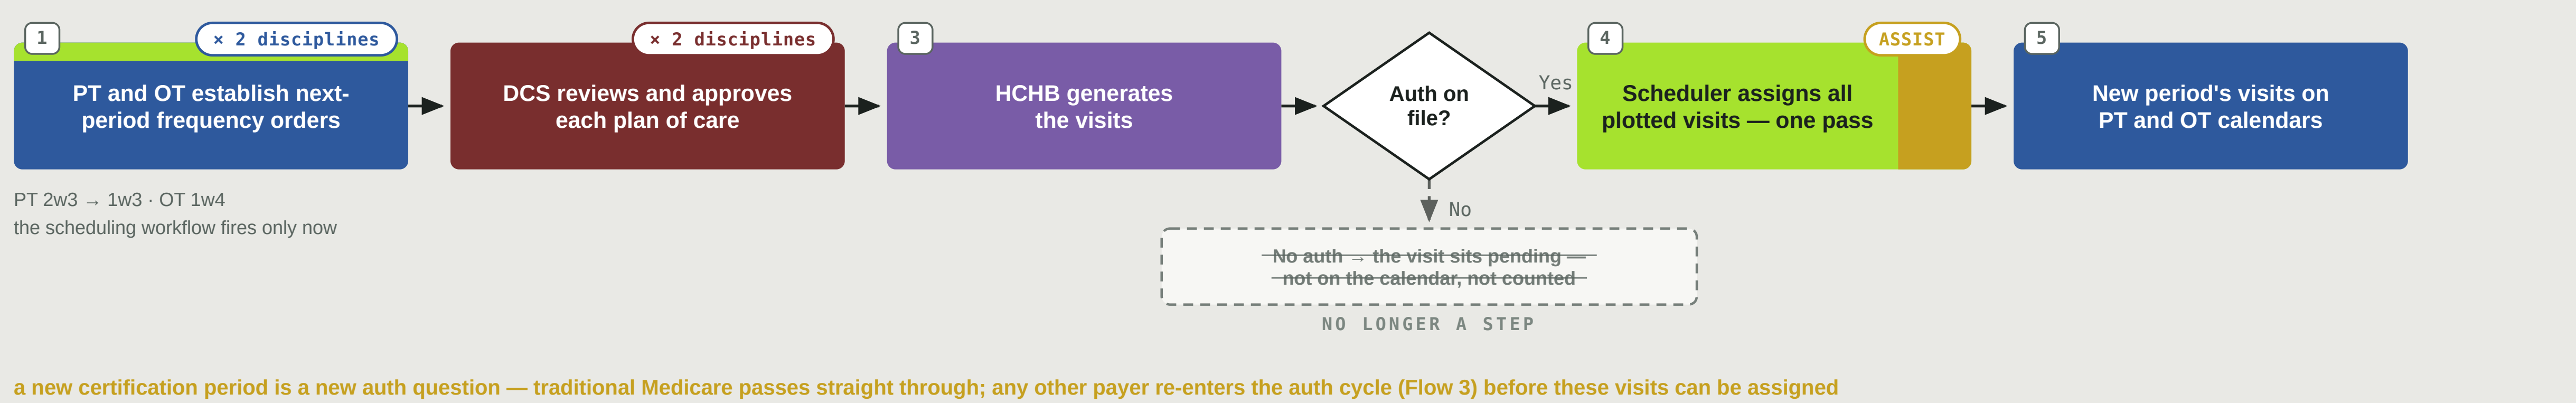

THE DECISION · EACH ACTIVE DISCIPLINE, SEPARATELY, AGAINST ITS OWN GOALS

THE WORKED EXAMPLE · SN DISCHARGES – PT AND OT RECERTIFY

AFTER THE RECERT VISITS · THE NEXT PERIOD IS BUILT

IF NO DISCIPLINE RECERTIFIES – THE AGENCY DISCHARGE

- Every discipline still discharges separately — the earlier ones non-OASIS, exactly like SN above
- The last discipline active performs the agency discharge with the D/C OASIS — RN, PT or OT, whoever makes the final visit
- The owner of the agency discharge is unknown until it happens — and the episode's capacity returns to the branch

BOUNDARIES

Recert visits are plotted at the original POC

The window binds only recertifying disciplines

Each discipline decides separately

Scheduling fires only after frequency is set
