

# Routine Visit Scheduling

Read beside Flow-Routine-Visits — same blocks, same positions. A dashed, struck-through block is a step that no longer exists

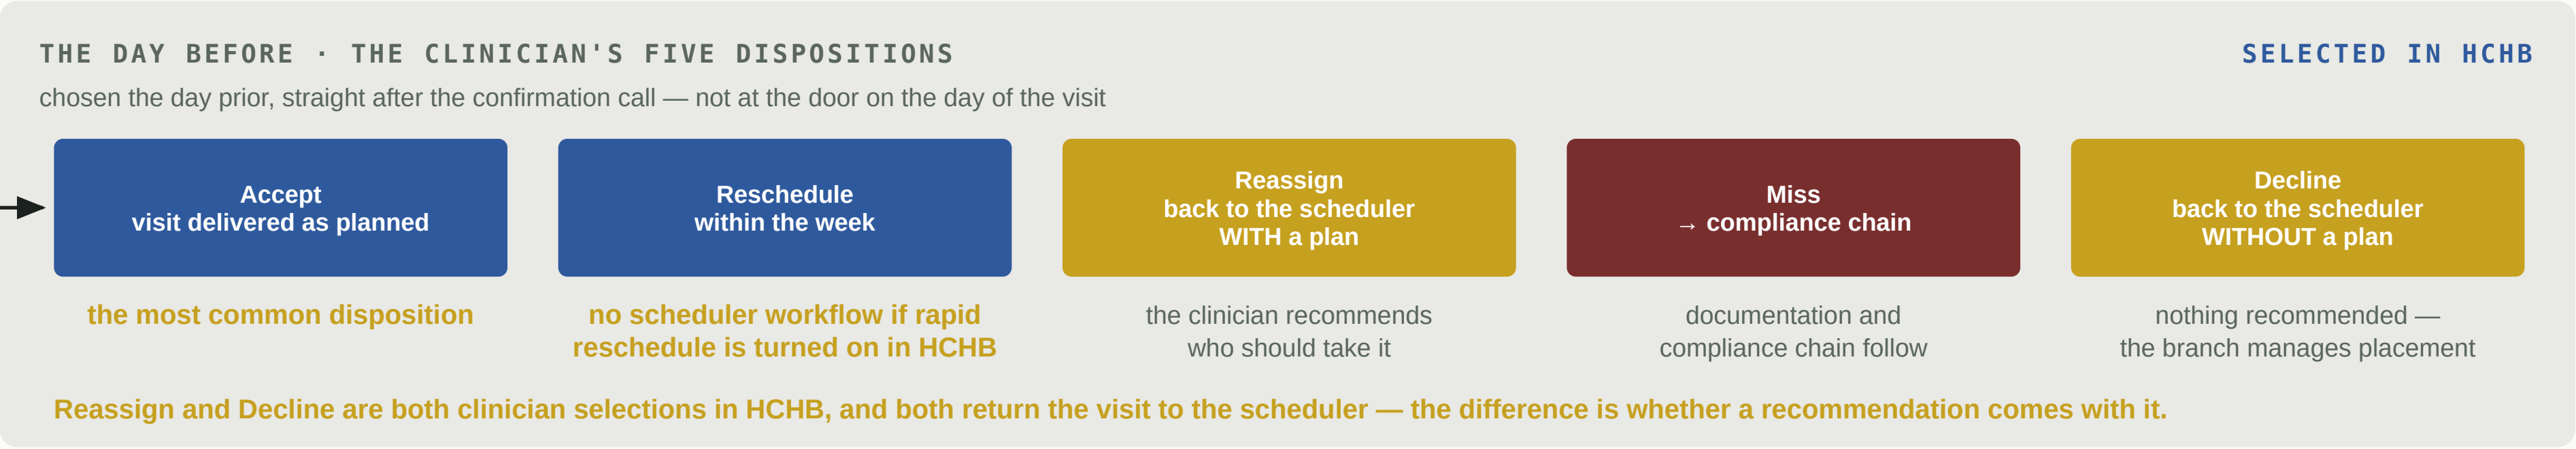

TRIGGER

a physician order may add a discipline evaluation, change the frequency, or reduce the visits every one routes through DCS approval and auth before reaching the scheduler

The first visit at 8 or 9am is the single largest lever on an individual clinician's capacity.  
Newer clinicians let the patient set the time, become over-accommodating, and push the cost onto the rest of the team.
